## IE 421/428: Information Systems Analysis and Design

(Dr. Xueping Li)

---

### Homework Assignment (WWW - Build a site for your CV!)

**1:** Build a responsive web site to host your resume.

Use the W3.CSS "CV Template" from the website ([https://www.w3schools.com/w3css/w3css\\_templates.asp](https://www.w3schools.com/w3css/w3css_templates.asp)). You don't have to use all the "real" information but make sure to have all basic information in the template. In addition, add a new section ("Courses") to list a few key IE courses. In the Education section, add a URL to [ise.utk.edu](http://ise.utk.edu) and/or [www.utk.edu](http://www.utk.edu). In the skills section, add a few IE skills. Add some "Big Orange" color to some of the items. (Tip: use w3-orange CSS class to replace "w3-teal".) Add proper web links to the footer (social media).

Feel free to add more information but these are the minimal requirements for this homework. Also, do feel free to use other templates. For example, there are many at <https://html5up.net/>.

#### Submission Guideline:

1) Zip your whole folder and all the files in it and upload this zipped file to Canvas. &

2) I have purged the FTP site. (For some of you, you had your fun and now please stop messing around it, e.g., adding a "banana" to my folder and dragging around the folders and delete things that don't belong to you.) Now, you can create your own folder. For this homework submission, do the following: login to the FTP server, go to "/xli27/hw-www" folder, create a folder with your UT NetID, and upload your homework project (unzipped) folder there!

Method 1) is the official method and 2) is to save my/TA's time and for you to see it. You should be able to see whether it is working or not at <https://linuxise.engr.utk.edu/xli/hw-www/YOURNETID/>. Hope this works for most of you.
